Claims 53-57 and 60 stand and newly amended claim 58 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 51, 52, 59 and 61-78 stand rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement, for reasons of record set forth in the previous Office Action, mailed 9 February 2007.

At the paragraph bridging pages 6 and 7 of the amendment filed 6 August 2007, as well as at the first full paragraph at page 7, Applicants argue that the hybridization recited in the claims is at high stringency conditions, and that the "sequences that hybridize under high stringency hybridization condition encompass nucleic acid sequences which encode polypeptides having transcriptional activation activity which have a high structural and functional similarity to the polypeptide encoded by SEQ ID NO:48, e.g., nucleic acid sequences which encoded polypeptides having conservative amino acid substitutions, as described in the specification on page 28, lines 4-18." However, a relatively short stretch, e.g., 25-50 nucleotides might hybridize strongly, with no other portion of the nucleic acid hybridizing at all to the probe, and the result will still be "hybridization". Thus, mere hybridization, even highly stringent, does not mean that

Art Unit: 1636

the sequence of the majority of the nucleic acid molecule is in any way established, i.e., described. Highly different molecules can hybridize based on a small stretch of identity or near identity, and so possession is not demonstrated for the entire claimed genus.

At the second full paragraph at page 7, Applicants argue that the specification provides support for fragments of SEQ ID NO:48 that retain the activity, and that one of skill would have recognized Applicants' possession thereof in view of techniques in the art for producing them. However, as set forth in the previous Office Action, the specification does not provide teachings with respect to regions of the polypeptide which confer the activity, nor a structure-function relationship which would have shown one of skill which fragments would retain the activity. Thus, possession of the full scope of the claimed invention was not demonstrated at the time of filing.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 1636

however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
